

Sabun-RX

Oncology Assistant for Head, Neck, Throat, and Sinus Infections or Cancers

Nasal Medication Spray and Mouth/Throat Medication Spray for Head Tumors

Introduction

Sabun RX - Head Oncology Assist

Sabun RX is an FDA-approved medication for treating viral infections and cancers in the head, throat, sinuses, and neck. Sabun-RX nasal injectors deliver high-alkalinity medication into infected areas as a pre-treatment and/or treatment method. Sabun-RX products should be used before ANY head, throat, sinus, or neck diagnosis or operation.

Sabun-RX protects doctors and patients during dangerous oncology operations by removing large percentages of viral loads without tools or invasive diagnosis. Sabun-RX should be used as a first step during oncology appointments, before imaging or manual inspection.

Sabun-RX

Sabun-RX is an FDA-approved food-grade peroxide-based clinical head, neck, throat, and nasal pore scrubbing medication soap formula by Virus Treatment Centers. Sabun-RX products contain medicated electrolytes for clinical anti-oxidization of viral loads and tumor mass.

Sabun-CRT

Sabun-RX CRT is an FDA-approved food-grade chlorine-based clinical nasal disinfectant medication spray. Sabun-RX formula includes medicated electrolytes for clinical recovery of head, neck, throat, and throat and sinus oncology patients.

Sabun-SIC

Sabun-RX SIC is an FDA-approved food-grade proprietary clinical nasal medication spray. Sabun-RX SIC provides medicated layers of protection that seal pores and passageways of the head, neck, throat, and sinus post-treatment. Sabun-RX SIC protects sensitive flesh and open sores within the head and neck from reinfection by blocking viral loads from attacking applied flesh. Viral species are not able to survive in high-alkaline environments. Increasing the alkalinity within the throat and sinus cavities protects our oncology patients post-treatment. The heat or spicy flavoring that patients may notice is specifically formulated to break down and cook off plasmodium parasites, the remaining resultant of REDOXed viral species.

Instruction

1. Before treatment with Sabun-RX, the face, lips, mouth, teeth, tonsils, sinuses, and throat should be coated in Carmex.

2. Sabun-RX CRT is a fast-acting nasal injection antiviral medication for disinfection. Sabun-RX CRT is used to quickly express viral loads from oncology patients into proper hazmat containers.
3. Sabun-RX via Oral and Nasal Injector is used in high volumes to clean the head, throat, sinus, and neck passages. Sabun-RX must sit until the bubbles stop forming, and then more must be applied until no bubbles appear on the flesh.
4. Cleaning passageways with Sabun-RX may remove some or most of the applied Sabun-RX CRT medication. After cleaning, Sabun-RX CRT may be used again to introduce antibacterial disinfecting medication into the nasal and throat passageways.
5. Sabun-RX mouth spray should be used thoroughly in the mouth and throat at the end of treatment. Teeth, mouth, gums, and throat should be scrubbed thoroughly with a medium toothbrush. A hard toothbrush may be used on the teeth.
6. Sabun-RX SIC nasal injection is a post-treatment viral inhibitor and pain reliever that protects sensitive tissue from reinfection. Apply generously.
